PROFESSIONAL SUMMARY

Hello, I'm a final-year BCA student at IGNOU (graduating 2027). I've built ETL pipelines and analytics projects in Python, SQL, Excel, and Power BI, mostly working with real fintech and market data. I like taking messy, scattered datasets and turning them into something people can actually use, and I can explain what I find to people who aren't technical too. Looking for a data science fellowship to build on this and get deeper into applied ML.

EXPERIENCE

Data Analyst Intern — Bluestock Fintech *June 2026 – August 2026*

Remote (Part-time)

- Built and automated an ETL pipeline in Python, SQL, and SQLite that cleaned and loaded 100,000+ scattered AMFI mutual fund records into one dataset, so reports could be generated automatically instead of by hand
- Worked on a second ETL project on Nifty100 market data, cleaning up inconsistent records so the data was usable for trend analysis and dashboards

PROJECTS

Mutual Fund Analytics Platform — *2026*

https://github.com/khsuhiyadav97/Mutual-Fund-Analytics

- Combined 10 separate AMFI datasets (100,000+ rows) into a single 6-table SQLite database using an automated SQLAlchemy pipeline, so funds could be compared and trends tracked across the whole dataset
- Calculated Sharpe Ratio, Sortino Ratio, Alpha, Beta, CAGR, and Maximum Drawdown for 40 funds, then built a 0–100 scorecard so it's easier to compare a fund's risk against its returns
- Used 9 Plotly/Seaborn visualizations and 10 SQL queries to dig into patterns like YoY SIP growth and differences in expense ratios across funds

Spotify Track Popularity Analysis — *2026*

https://github.com/khsuhiyadav97/Music_Insights

- Cleaned and merged two Kaggle datasets in Pandas (missing values, duplicates, inconsistent labels), then looked at which audio features actually affect popularity — found that popular tracks tend to be louder, more energetic, and less acoustic
- Built a Power BI dashboard with KPI cards, scatter plots, and a genre filter so people without a data background could explore the findings themselves

ACHIEVEMENTS

- Reached the semifinals at CodeFusion 2K26, a national-level web/app development hackathon with around 250 teams. Got through two rounds of eliminations and just missed the final cut, but still delivered a working prototype with my team under a tight deadline

TECHNICAL SKILLS

Languages: Python, SQL

Analysis: Pandas, NumPy, SciPy, Excel, EDA, ETL, Data Cleaning, Feature Engineering

Visualization: Power BI, Tableau, Plotly, Seaborn, Matplotlib, Jupyter Notebook

Databases: SQLite, MySQL, PostgreSQL, SQLAlchemy

Tools: Git, GitHub, VS Code, Google Colab, Google Workspace, Agile

Soft Skills: Communication, Teamwork, Problem-Solving

EDUCATION

Bachelor of Computer Applications (BCA) — *2024 – 2027 (Expected)*

Indira Gandhi National Open University (IGNOU), Delhi

Relevant coursework: Data Structures, DBMS, Computer Networks, AI & ML

12th Grade — Science — *90.2%*

GMIC, Etawah (UP), UPMSP

CERTIFICATIONS

- Data Analytics Essentials — Cisco Networking Academy, 2026
- Data Visualization & Software Development Job Simulations — Tata Consultancy Services (Forage), 2026
